A new food to keep your dogs happy

Eukanuba has made a companion diet to their wonderful diet Senior Plus and it is called Adult Plus. Just like Senior Plus, Adult Plus is a diet designed to promote the health of dogs from head to tail and is a wonderful addition to our ability to keep our pets healthy.

Adult Plus is a dry food, designed for dogs between one to six years of age. It contains Eukanuba's Dental Defense System, designed to help keep the teeth and gums healthy. It contains glucosamine and chondroitin sulfate, which helps to minimize and prevent cartilage damage from osteoarthritis in the joints. It contains omega-3 and omega-6 fatty acids, potent anti-inflammatories to reduce arthritis, itching from allergies, and to promote skin health and coat luster. It contains L-carnitine, which helps to control weight.

So for what dogs is this diet beneficial? All of them. But it is primarily designed for dogs with early joint problems and dental disease prevention. In the United States, one out of five dogs have osteoarthritis. If your dog has problems getting up, limping, gait abnormalities, is reluctant to run, jump, play, or lags behind on a walk, then you should definitely make an appointment and make sure to mention Eukanuba's Adult Plus. Over the last 4 years since we started carrying Eukanuba foods, we have been very impressed with the science behind the food, its palatability, and the results.
